ATTN: Director of Development Services Division
City of Topeka

Project Building Address:

Project & Building Description:

WE CERTIFY with acceptance of this submittal as our confirmation, the manufacturer's components of the subject pre-engineered building are designed in accordance with Chapter 16 – Structural Design, Chapter 22 – Steel, and Chapter 23 – Wood of the 2006 International Building Code (2006 IBC) and City of Topeka Ordinance No. 18882.

All structural load-carrying members are designed to carry loads per these requirements as well as the following minimums specified in the City of Topeka City Codebook, Chapter 26:

- 20 pounds per square foot roof snow load on a horizontal projection / non-reducible
- 90 mile per hour wind load – 2006 IBC 2006 Section 1609
- Seismic Zone Classification – 2006 IBC Section 1613, specific to site class

WE FURTHER CERTIFY:

No snow load reductions have been taken due to tributary area or exposure to wind. Greater snow loads have been considered at locations of potential accumulation such as valleys, parapets, supplemental roof structures, offsets, etc. Combinations of loads were considered as required in the 2006 International Building Code.

The building components, when properly erected on a structurally compliant foundation system, in accordance with the fabrication and erection drawings as furnished, will meet the design loading requirements for the City of Topeka and in accordance with good engineering practice.

This does not certify field modifications or design of materials not furnished by this manufacturer.
